SALUGEN BIOSCIENCES STATEMENT ON THE PASSING OF BETTY FORD

Personalized pain medicine laboratory Salugen Biosciences expresses sadness at the passing of former First Lady Betty Ford and gratitude for her pivotal role in raising awareness about the addiction to pain killers

SAN DIEGO, CA (July 11, 2011) – Salugen Biosciences, Inc., the personalized pain medicine laboratory services company, expresses its deepest sympathies to the surviving children and grandchildren of former First Lady Betty Ford on her passing this past Friday.

As a company committed to reducing and avoiding addictions to prescription pain medications through laboratory-guided therapeutic decisions, Salugen Biosciences applauds the tremendous work of Betty Ford and the Betty Ford Center in helping patients suffering from addictions. Her establishment of the Betty Ford Center in Rancho Mirage, California in 1982 raised the bar for substance abuse treatment and helped lift the veil of shame that accompanied addiction. While her death is a cause for sadness, we know that this Center will honor her legacy by giving countless Americans a new lease on life.

Salugen Biosciences Executive Chairman Brian Meshkin states, “We take great comfort in knowing that former First Lady Betty Ford is reunited with President Gerald Ford together forever. We have an increased devotion to this important cause, as we are dedicated to the unfinished work which Betty Ford worked so tirelessly to achieve.”

About Salugen Biosciences
